

Rushi Kiran Adiboina

Full Stack Developer

TX • (561-816-0187) • rushikiranadiboina@gmail.com • <https://www.linkedin.com/in/rushi-adiboina/>

PROFESSIONAL SUMMARY :

Full Stack Developer with 6+ years of experience designing, developing, and supporting scalable enterprise applications across banking, retail, and SaaS environments. Strong hands-on experience with React.js, TypeScript, JavaScript, Java, Spring Boot, microservices, RESTful APIs, GraphQL, and SQL, building reusable frontend components and distributed backend services. Experienced with Kafka, PostgreSQL, SQL Server, Docker, Kubernetes, AWS, Azure, Jenkins, and Azure DevOps for event-driven processing, cloud deployment, and CI/CD automation. Hands-on exposure to RAG and LLM-enabled enterprise applications, with additional experience in performance optimization, production troubleshooting, secure API development, and Agile software delivery.

TECHNICAL SKILLS

Methodology: SDLC, Agile

Languages: JavaScript, TypeScript, Java, Python

Front End Development: React.js, Redux, Angular, HTML5, CSS3, Bootstrap, Material UI, AG-Grid

Back End Development: Node.js, Express.js, Spring Boot, Spring MVC, Hibernate/JPA, RESTful APIs, GraphQL, Microservices

Databases: PostgreSQL, Oracle, SQL Server, MySQL, DB2, MongoDB, NoSQL

Cloud Technologies: AWS, Microsoft Azure, GCP

Azure Services: Azure App Services, Azure Functions, Azure Storage, Azure Kubernetes Service (AKS)

DevOps / CI-CD: Jenkins, Azure DevOps, Git, Maven, Docker, Kubernetes, Terraform, SonarQube

Messaging / Streaming: Apache Kafka

Testing: JUnit, Mockito, Jest, Jasmine, Karma, Mocha

API / Development Tools: Postman, Swagger, Git, Jira, ServiceNow

Monitoring / Observability: Splunk, ELK Stack, Elasticsearch, Kibana

Data / AI: RAG, LLMs, Azure OpenAI

Security: Spring Security, OAuth 2.0, JWT, RBAC

IDEs: IntelliJ IDEA, Visual Studio Code, Eclipse.

Work Experience:

Employer : YTR INFOTECH LLC

Client: United Bank | Senior Software Engineer

July 2026- present

-
- Working as a **Senior Software Engineer on the Automated Data Management Framework (ADMF)**, an internal United Bank platform supporting **enterprise data management, operational decision-making, risk controls, and improved customer experience**.
 - Led development of the **OneUI dashboard, defining reusable React component architecture, backend API contracts, and implementation documentation in Confluence** to support maintainability and knowledge sharing.
 - Designed and delivered a customizable **React-based dashboard with drag-and-drop widgets and shared Redux state management**, enabling reusable components across multiple application pages.

- Drove implementation of **micro-frontend architecture using Webpack 5 Module Federation**, enabling **independently developed and deployed frontend modules** while maintaining consistent enterprise user experience.
- Built the **Task Management UI end to end**, implementing **sorting, pagination, search, CRUD workflows, role-based reassignment, bulk reassignment, and email/in-app notification capabilities**.
- Designed and developed **reusable frontend components**, including a **shared Pagination Table**, improving UI consistency, reducing duplicate code, and simplifying future application enhancements.
- Delivered Team Management functionality for adding and editing members and owners using reusable modal-based forms, asynchronous loaders, input validation, and responsive UI patterns.
- Led migration from **WFRIA to Pioneer Core**, refactoring existing application modules to adopt updated tables, forms, modals, and standardized UI patterns while maintaining application stability.

Employer: West Coast Consulting

Client: Walmart (Sam's Club – Quest promotions platform) | Full Stack Developer

FEB 2025 – June 2026

- Developed and enhanced the **Sam's Club Quest Promotions Platform using React.js, TypeScript, Java, Spring Boot, and REST APIs**, supporting end-to-end promotion configuration, validation, publishing, and operational workflows.
- Implemented **Offer ID / Item Group ID validation guardrails across 2 user workflows—Supplier and Operations (OPS)**, enforcing a **3-level validation priority for Sign ID**, vendor mismatch, and missing shared-item scenarios to prevent invalid promotion configurations before publishing.
- Delivered **5+ promotion-rule and UI enhancements**, including **MPQ > 1 dynamic subtitle logic**, Trigger Action Code validation, supplier email validation, **Freebie-label lifecycle fixes**, and a **68-character QSQU content guardrail**, improving consistency across promotion-management workflows.
- Built and enhanced reusable **React, Redux, and AG-Grid components**, resolving complex selection and statemanagement scenarios such as select-all behavior and enum-child handling, with supporting unit-test coverage.
- Developed and consumed RESTful APIs supporting promotion publishing and integrations across **10+ downstream enterprise systems**, including Quicksilver, Mercury, Signage, IPM, PDP/PLP, Scan & Go, POS, Email, OMS, and CDP.
- Enhanced the **BigList export and publishing workflow** and resolved release-blocking integration issues, including an Apollo-related upload regression, restoring reliable promotion publishing across application environments.
- Supported **application deployment and release workflows using Docker, Kubernetes, Azure, CI/CD pipelines, Git**, and automated testing, collaborating with frontend, backend, QA, and DevOps teams throughout production releases.
- Provided **L3/on-call production support** and root-cause analysis for distributed application issues, including **ADF/Databricks processing failures, BigList publishing failures**, and customer-facing application defects, coordinating fixes across engineering and support teams.
- Implemented **event-driven architectures using Kafka** to process promotion eligibility, campaign notifications, and customer activity events in real time.
- Contributed to **AI-assisted and LLM-enabled application** capabilities using **RAG, Azure OpenAI, and SQL LLMs**, enabling natural-language interaction with enterprise promotion data and supporting campaign and merchandising insights.
- Integrated **Azure AI Search and Azure OpenAI** services with Java/Spring Boot APIs to support contextual retrieval and LLM-powered enterprise workflows.
- Supported **production releases** and incident resolution using **Docker, Kubernetes, Azure, CI/CD pipelines, Git, automated testing, and L3/on-call troubleshooting** across distributed promotion services.

Environment: Java 21, Spring Boot, Spring MVC, React.js, TypeScript, JavaScript, HTML5, CSS3, REST APIs, GraphQL, PostgreSQL, SQL Server, Apache Kafka, Azure, AKS, Docker, Kubernetes, Azure DevOps, Jenkins, Git, Maven, JUnit, Mockito, OAuth 2.0, JWT, RAG, Azure OpenAI, Azure AI Search

Employer: TANGENSIS INC**Client : Bank of America | Full Stack Developer****Jun 2023 – Jan 2025**

- Owned **end-to-end development of a large-scale portfolio management application using React.js**, JavaScript, TypeScript, REST APIs, and modern micro-frontend architecture, delivering real-time investment and portfolio insights.
- Designed and developed reusable **React micro-frontend components for asset allocation**, performance analytics, and risk-analysis workflows, improving modularity, scalability, and independent feature delivery.
- Developed backend services and REST APIs **using Node.js and Express.js**, integrating React-based frontend modules with enterprise financial services and relational databases.
- Designed and optimized complex **SQL queries, indexes, and data-access patterns**, improving application performance and supporting low-latency processing of financial data.
- Worked with relational database technologies supporting enterprise financial applications, with experience across **PostgreSQL, Oracle, SQL Server, and MySQL**.
- Implemented event-driven and asynchronous application processing using **Apache Kafka**, improving scalability, reliability, and real-time updates across distributed services.
- Developed secure enterprise applications using **OAuth 2.0, JWT**, and role-based access control (RBAC) to protect APIs and sensitive financial information.
- Worked with **AWS IAM roles and policies, CodePipeline, and CloudFormation** to support secure application deployments, CI/CD automation, and repeatable cloud infrastructure provisioning.
- Contributed to CI/CD and automated build/release processes using Jenkins, Git, Docker, and deployment pipelines, supporting reliable application releases across environments.
- Developed a **RAG-based Agentic AI solution integrated** with Confluence, enabling business, product, and engineering teams to query portfolio requirements, application logic, and technical documentation using natural-language interactions.

Environment: React.js, JavaScript, TypeScript, Java, Spring Boot, REST APIs, GraphQL, SQL, PostgreSQL, Oracle, SQL Server, MySQL, Kafka, Redis, OAuth 2.0, Jenkins, Git, Docker, CI/CD, Agile/Scrum, RAG, Agentic AI

Tata Consultancy Services, India | Software Developer**Jan 2020 - Jun 2022**

- Contributed to **end-to-end development of 2 enterprise SaaS applications, Gotara and Pulsora**, using **React.js, Redux, Java, Spring Boot, and REST APIs**, supporting development through production go-live.
- Developed responsive frontend functionality using **React.js, React Router, Redux, JavaScript ES6+, and Material UI**, building reusable components and centralized state-management patterns.
- Designed and developed backend services using **Java, Spring Boot, J2EE, Hibernate/JPA, and RESTful APIs**, supporting enterprise application and data-processing workflows.
- Developed REST APIs using **Spring Boot and Spring Data JPA** and **optimized PostgreSQL** performance through indexing, query tuning, execution-plan analysis, and efficient data-access patterns.
- Built and deployed cloud-based application components using **AWS EC2, S3, Lambda, and API Gateway**, supporting scalable workloads, storage integration, and serverless REST functionality.
- Containerized Spring Boot services using **Docker** and implemented automated testing with **JUnit and Mockito**, while using **JMeter** to identify API performance bottlenecks and support application reliability.

Environment: Java, Spring Boot, Spring MVC, J2EE, React.js, Redux, JavaScript, Material UI, REST APIs, PostgreSQL, Lambda, API Gateway, Spring Security, JWT, JUnit, Mockito, JMeter, Docker

EDUCATION:

- Master of Science in Information Technology and management - Florida Atlantic University, Florida, USA
- Bachelor of Engineering in Electronics & Communication Engineering - SRM Institute of Science & Technology, Chennai, India
